## 6. OPERATION CONTROLS AND FUNCTIONS

### 6.1 Front and Rear Panels

### 6.2 Left and Right Panels

### 6.3 Top Panel

## 6.4 Installation Instructions

Each rack chassis is shipped partially assembled. Assembling of the left and right panels, 2 handles, and 2 front locking panels can be performed without any disassembly, however access to the top, bottom, and sides of the rack chassis is required in order to secure them in place so it is recommended to do so prior to placement within a rack. Installation of compatible units only requires the removal of the 2 front locking panels and can be performed while the chassis is installed in a rack.

### 6.4.1 Complete Rack Chassis Assembly

#### STEP 1

Screw the 6 screws holding the right panel in place, then screw the 6 screws holding the left panel in place.

## STEP 2

Screw the 2 screws holding the right handle in place, then screw the 2 screws holding the left handle in place.

## STEP 3

Attach the top and bottom locking panels by screwing in the 3 thumbscrews on each until they are tight and secure.

*Note: Be careful to not overtighten the thumbscrews as this could damage the screw threads.*

## 6.4.2 Full/Half-Length Unit Installation

### STEP 1

Unscrew the 3 thumbscrews holding the top locking panel in place, and remove the panel from the front of the chassis. Unscrew the 3 thumbscrews holding the bottom locking panel in place, and remove the panel from the front of the chassis.

*Note: The thumbscrews are connected to the locking panels with a retention mechanism and will not come completely free when they have been unscrewed from the chassis.*

## STEP 2

Align and then carefully slide a full or half-length compatible audio/video unit into the top/bottom grooves of a free slot. Half-length units are designed with a notch to prevent them from sliding all the way to the back of the rack chassis. Repeat this step until all units have been installed.

*Note: If fewer than 15 units are being mounted it is strongly suggested to leave empty space between units that get particularly warm to improve airflow and heat dissipation.*

### STEP 3

Reattach the top and bottom locking panels by screwing in the 3 thumbscrews on each until they are tight and secure.

*Note: Be careful to not overtighten the thumbscrews as this could damage the screw threads.*
