Introduction

Welcome to Kramer Electronics! Since 1981, Kramer Electronics has been providing a world of unique, creative, and affordable solutions to the vast range of problems that confront the video, audio, presentation, and broadcasting professional on a daily basis. In recent years, we have redesigned and upgraded most of our line, making the best even better!

Getting Started

We recommend that you:

- Unpack the equipment carefully and save the original box and packaging materials for possible future shipment.
- Review the contents of this user manual.

Go to <u>www.kramerav.com/downloads/SWT3-41-U-T</u> to check for up-to-date user manuals, application programs, and to check if firmware upgrades are available (where appropriate).

Achieving Best Performance

- Use only good quality connection cables (we recommend Kramer high-performance, high-resolution cables) to avoid interference, deterioration in signal quality due to poor matching, and elevated noise levels (often associated with low quality cables).
- Do not secure the cables in tight bundles or roll the slack into tight coils.
- Avoid interference from neighboring electrical appliances that may adversely influence signal quality.
- Position your Kramer SWT3-41-U-T away from moisture, excessive sunlight and dust.

Safety Instructions

Caution:

- This equipment is to be used only inside a building. It may only be connected to other equipment that is installed inside a building.
- For products with relay terminals and GPI\O ports, please refer to the permitted rating for an external connection, located next to the terminal or in the User Manual.
- There are no operator serviceable parts inside the unit.

Warning:

- Use only the power cord that is supplied with the unit.
- To ensure continuous risk protection, replace fuses only according to the rating specified on the product label which is located on the bottom of the unit.

Recycling Kramer Products

The Waste Electrical and Electronic Equipment (WEEE) Directive 2002/96/EC aims to reduce the amount of WEEE sent for disposal to landfill or incineration by requiring it to be collected

and recycled. To comply with the WEEE Directive, Kramer Electronics has made arrangements with the European Advanced Recycling Network (EARN) and will cover any costs of treatment, recycling and recovery of waste Kramer Electronics branded equipment on arrival at the EARN facility. For details of Kramer's recycling arrangements in your particular country go to our recycling pages at www.kramerav.com/social-responsibility/environment.

Overview

Congratulations on purchasing your Kramer SWT3-41-U-T/ EXT3-UE-R/ EXT3-U-R/ ACC3-12-SP.

This section defines SWT3-41-U-T, EXT3-UE-R, EXT3-U-R and ACC3-12-SP.

SWT3-41-U-T 4x1 USB Switcher

The **SWT3-41-U-T** is a high-performance switcher transmitter with two USB-C and two USB-B ports for USB host devices connection and plug and play host user auto-switching experience based on active USB signal detection. The local and remote (over CAT-links) connected USB peripherals, such as a room camera and microphone, are switchable for use of the active USB host, for convenient online meeting participants operation.

SWT3-41-U-T provides exceptional quality, advanced and user-friendly operation, and flexible control.

Exceptional Quality

- USB 3.1 Switching USB 3.1 signals switching, enables high data-rate connection between active USB host and meeting space USB 3.1 and 2.0 devices, such as 4K camera, high-quality audio devices, and HID (Human Interface Devices) mouse or keyboard devices.
- Comprehensive USB Extension Integrated dual-link transmitters for USB and LAN signals extension with 2–way power providing over extended–reach CAT twisted pair copper infrastructures. The locally selected USB host is auto–connected to remotely connected USB devices, employing either interrupt, bulk or isochronous USB 2.0 standard data transfer communication
- Cost-effective Dual-link USB Extension Deployment Link-paired remote USB receivers are flexibly connected via combined dual-link single CAT cable or dual independent CAT cables connections, according to space extension deployment needs. Typically used for long-distance connection of space remote two PTZ cameras, the combined dual-link single CAT cable runs to a midspan-located CAT splitter that optimally connects to receiver-connected cameras via the shortest independent CAT cables.

Advanced and User-friendly Operation

- Collaborative Online-meeting Switching Controllable switching of online-session USB host participants and space-deployed local and remote visual (such as camera) and audible (such as microphones or headsets) USB peripherals, allows collaborative online meeting and smooth content sharing operation among online meeting participants.
- BYOD Ease and Convenience Connect any USB–C device as an online meeting

participant, while providing the connected device with multiple concurrent capabilities of USB 3.1 and Ethernet connection, USB–driven content sharing, and (if PD–2.0–capable) up to 60 watts of power, all via a single USB–C cable connection only.

- Auto Switcher Ease of Use Automatically connects the plugged host to the space connected USB peripherals, according to user–configured preferences, such as last– connected host.
- Simple and Flexible Control Remote IP-controller connection, browser operation webpage, local panel buttons, and remotely connected contact-closure buttons triggering configurable operation functions, for easy and fully flexible USB host ports selection, and switcher control.

Flexible Connectivity

- Flexible USB Connectivity Wide Variety of USB peripheral and dual-role devices can be extended including cameras, touch screens, smart boards, hard drives, game controllers, audio devices, printers, scanners, or HID (Human Interface Devices) devices such as a mouse or keyboard.
- Built-in Intelligent Control Gateway Remote IP-driven intelligent control of local and remote connected USB peripherals (such as PTZ cameras) and sensor devices via IP, RS-232 or I/O. Eliminating the need for an external control gateway, this feature reduces installation complexity and costs, to enable easy integration with control systems, such as Kramer Control.
- Secured Connectivity Standard IT–grade 802.1x authentication for secured IT LAN connectivity operation.
- Comprehensive and Cost-effective Management Local panel indication LEDs to facilitate easy local maintenance and troubleshooting. Remote IP-driven device firmware upgrade and management, via user-friendly embedded web pages and optional whole site management system, ensure lasting and field proven deployment.
- Easy and Elegant Installation PoE powering via LAN port connection, 2–way powering to CAT–paired devices, and half 19" rack noise–free fan–cooled enclosure for under table mounting, or side–by–side mounting of 2 units in a 1U rack space, for easy and convenient deployment.

EXT3-UE-R USB Receiver

EXT3-UE-R is a comprehensive 2–way powering USB 2.0 receiver over extended–reach twisted pair CAT cable. The receiver converts the transmitted CAT signal into USB 2.0, Ethernet, RS-232 and audio signals.

EXT3-UE-R provides exceptional quality, advanced and user-friendly operation, and flexible control:

Exceptional Quality

- Comprehensive USB Extension Plug & play USB over CAT receiver for connecting a remote USB host to the locally connected USB peripherals, employing either interrupt, bulk or isochronous USB 2.0 standard data transfer communication.
- Simple USB Peripheral Control Remote IP-driven or serial control, via the

CAT-extended control signals of the connected USB peripherals, such as PTZ cameras and soundbars by a remote LAN-connected control system (for example, Kramer Control).

• Flexible USB Connectivity – Wide Variety of USB peripheral and dual-role devices can be extended including cameras, touch screens, smart boards, hard drives, game controllers, audio devices, printers, scanners, or HID (Human Interface Devices) devices such as a mouse or keyboard.

Advanced and User-friendly Operation

• USB Peripheral Charging – Fast USB charging of connected USB peripherals when the receiver is powered by a power supply, and standard USB charging when the receiver is powered by the transmitter via CAT.

Flexible Connectivity

- Bidirectional Ethernet Extension LAN interface data flows in both directions, allowing network data transmission and connected–devices control.
- Bidirectional RS–232 Extension Serial interface data flows in both directions, allowing data transmission and device control.
- Audio Extension The transmitted analog audio line signal from the remote audio source is connected to the locally connected audio playing device.
- Comprehensive and Cost-effective Management Local panel indication LEDs facilitate easy local maintenance and troubleshooting. Remote management of connected triggerable I/O devices (such as sensors), via user-friendly embedded web pages and optional whole site management system, ensure lasting and field proven deployment.
- Easy Installation Single twisted–pair cable for carrying signal and power wiring. Compact TOOLS® fan–less enclosure for device–back mounting, or side–by–side mounting of 3 units in a 1U rack space with the recommended rack adapter.

EXT3-U-R USB Receiver

EXT3-U-R is a comprehensive, extended-reach CAT extender kit for USB 2.0, RS-232 and audio signals and 2-way powering over twisted pair. The **EXT3-U-R** transmitter converts the USB input signal into a CAT signal. The **EXT3-U-R** receiver converts the transmitted CAT signal into a USB signal.

EXT3-U-R provides exceptional quality, advanced and user-friendly operation, and flexible control:

Exceptional Quality

- Comprehensive USB Extender Plug & play USB extender kit for providing extendedreach CAT signals and 2-way power over twisted pair copper infrastructures. A local USB host is auto-connected to remote-connected USB devices employing either interrupt, bulk or isochronous USB 2.0 standard data transfer communication.
- Flexible USB Connectivity Wide Variety of USB peripheral devices can be extended including cameras, touch screens, smart boards, hard drives, game controllers, audio devices, printers, scanners, or HID (Human Interface Devices) devices such as a mouse or keyboard. Dual role and OTG (On The Go) devices such as smart phones and

tablets, connected either to a transmitter–side USB host port or receiver-side USB device port, can communication with a remote host or peripheral pairing device.

Advanced and User-friendly Operation

• Remote USB Charging – Fast USB charging of peripheral devices when the receiver is powered by a power supply, and standard USB charging when the receiver is powered by the transmitter via CAT.

Flexible Connectivity

- Bidirectional RS-232 Extension Serial interface data flows in both directions, allowing data transmission and device control.
- Audio Extension Send an audio signal from an audio source connected to the transmitter to an active audio playing device connected to the receiver.
- Cost-Effective Maintenance Status LED indicators facilitate easy local maintenance and troubleshooting.
- Easy Installation Single twisted-pair cable for signal and power wiring. Compact PicoTOOLS® fan-less enclosure for device–back mounting, or side-by-side mounting of 4 units in a 1U rack space with the recommended rack adapter.

ACC3-12-SP 1:2 CAT cable splitter

ACC3-12-SP is a passive splitter of one 4-pair signals-carrying CAT cable to two 2-pair signals-carrying CAT cables, for optimized deployment of extension copper wiring infrastructure.

Typical Applications

- Enterprise and education online meeting rooms.
- Upgrade AV meeting rooms to hybrid meeting rooms.
- Any solution with flexible connection of multiple USB hosts and local or remote room peripherals.

Controlling your SWT3-41-U-T

Control your SWT3-41-U-T directly via the front panel push buttons, or:

- Via the IP commands transmitted by a controller and touch screen system, or a browser using built-in user-friendly Web pages.
- By RS-232 serial commands transmitted by a touch screen system, PC, or a serial controller.

Defining SWT3-41-U-T 4x1 USB Switcher

This section defines SWT3-41-U-T, EXT3-UE-R, EXT3-U-R and ACC3-12-SP.

Defining SWT3-41-U-T

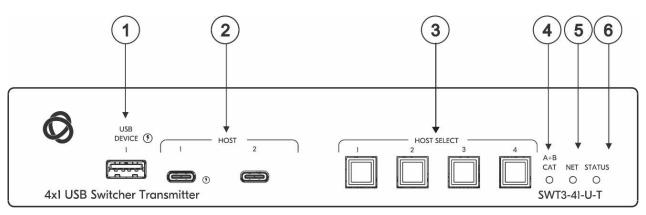

Figure 1: SWT3-41-U-T 4x1 USB Switcher Front Panel

| kjkj | Feature | Function | | |
|------|----------------------------------|---|--|--|
| 1 | USB DEVICE USB A 3.1 Ports | Connect to the USB local peripheral devices (for example, a USB camera, a soundbar, microphone and so on). | | |
| 2 | HOST on USB-C 3.1 ports (1 to 2) | Connect to a USB-C host (for example, a room PC) to communicate with the USB devices (for example, a PTZ camera) that are connected to the USB device ports and connect to the LAN. For Host 1 only : Charges the connected host (that supports USB Power Delivery 2.0) up to 60W when the device is powered via the optional 20V DC power adapter. While charging, the charging icon (to the right of the connector) becomes visible and lights orange. | | |
| 3 | HOST SELECT Buttons (1 to 4) | Press to select a host | | |
| (4) | A+B CAT LED | LED Status | Indicates | |
| | | Lights green | When dual CAT combined signals are sent over the A+B port. | |
| 5 | NET LED | LED Status | Indicates | |
| | | Dark | No IP address acquired. | |
| | | Lights green | A valid IP address has been acquired. | |
| | | Flashes green for 60s | A means to identify the device in a system. | |
| | | Flashes red/green | IP fallback address has been acquired. | |
| | | Flashes red | IP address access has been blocked by security. | |
| 6 | STATUS LED | LED Status | Indicates | |
| | | Dark | Power is off | |
| | | Lights white | PSU-powered on (only). | |
| | | Lights yellow | PoE-powered on. | |
| | | Lights green | Power is on and a source is connected. | |
| | | Lights blue | Power is on, and a source and an acceptor are connected. | |
| | | Flashes white/yellow | Device stand-by mode is active. | |

Kramer Electronics Ltd.

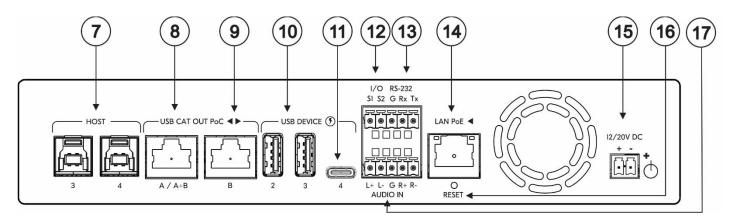

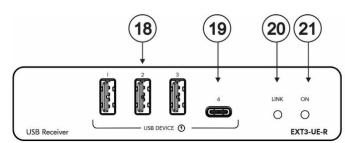

Figure 2: SWT3-41-U-T 4x1 USB Switcher Rear Panel

| # | Feature | | Function |
|------|---|-----------------------------|--|
| 7 |) HOST USB B 3.1 Connectors (3 to 4) | | Connect to a USB host (for example, a room PC) to communicate with the USB devices (for example, a PTZ camera) connected to USB device ports on this device and connect to the LAN. |
| 8 | USB CAT OUT PoC | A / A+B | Connect to a compatible CAT receiver (for example an EXT3-UE-R) or a compatible CAT splitter (for example an ACC3-12-SP). |
| 9 | | В | Connect to a compatible CAT receiver (for example an EXT3-UE-R). |
| 10 | USB DEVICE | USB-A 3.1 Ports (2 to 3) | Connect to the USB local devices (for example, a USB camera, a soundbar, microphone and so on). |
| (11) | USB-C 3.1 Port (4) | | Connect to the USB local devices (for example, a USB camera, a soundbar, microphone and so on). Note that this port does not provide Power delivery 2.0. |
| (12) | I/O 2-pin Term | inal Block | Connect to: |
| | (S1, S2, G) | | Input-triggering devices (for example, remote buttons or sensors), OR Output-triggered devices (for example, remote alarm LED indication). These GPIO ports may be configured as a digital input, digital output, or analog input ports. |
| 13 | RS-232 3-pin Terminal Block Connector (G, Rx, Tx) | | Connect to: RS-232 controlled device (for example, a PTZ USB camera) for its remote IP control by a controller (for example, an SL-240C), OR |
| | | | RS-232 control port of a controller (for example, an SL-240C) for extension via a CAT port, OR |
| | | | PC RS-232 port for controlling the device. |
| 14 | 4 LAN PoE | | Connect to LAN. The device accepts power from the LAN port (PoE). A LAN-enabled connection on the selected USB-C port is LAN-switched via this LAN port. |
| (15) | 5 12/20V DC Power Connector | | Use the included +12V 2A connector for powering the unit, or a +20V DC 6A power adapter (purchased separately) for also powering and charging the source device connected to the USB-C HOST ports on the front panel. |
| 16 | RESET Reces | sed Button | Press for about 5 seconds to reset SWT3-41-U-T to its factory settings. Press for 2-3 seconds for device reset. |
| 17 |) AUDIO IN 5-pin Terminal Block Connector | | Connect to a balanced, stereo audio source (for example, from the server) for extension via the CAT ports. |

Defining EXT3-UE-R

Defining EXT3-U-R

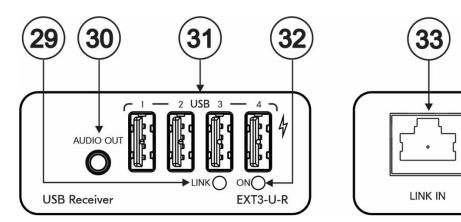

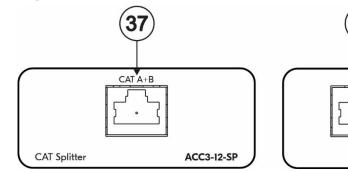

Figure 4: EXT3-U-R USB Receiver Front/Rear Panel

| # | Feature | Function | |
|----|------------------------------|--|--|
| 29 | LINK LED | lashes blue when a link is established. | |
| 30 | AUDIO OUT 3.5mm Mini Jack | Connect to an unbalanced stereo audio acceptor. | |
| 31 | USB 2 Type A Ports (1 to 4) | Connect to USB devices. Connect the receiver directly to the power adapter in order to charge USB devices. | |
| 32 | ON LED | Lights green when locally powered by the power adapter. Lights orange when powered by PoC. | |
| 33 | LINK IN RJ-45 Connector | Connect to the LINK OUT port on the EXT3-UE-R. | |
| 34 | PROG (Tx, Rx) | 5-pin Terminal Block Connector (with common G pin) | |
| 35 | RS-232 (Rx, Tx) | Press to toggle between a blank screen (blue or black) and the program display. The BLANK button can be programmed to mute the audio signal at the same time. | |
| 36 | 12V DC Power Connector | Connect to the power adapter. | |

Defining ACC3-12-SP

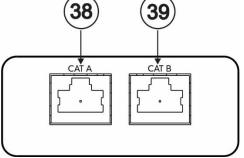

Figure 5: ACC3-12-SP 1:2 CAT cable splitter Front/Rear Panel

| # | Feature | Function |
|----|--------------------|--|
| 37 | CAT A+B RJ-45 Port | Connect to a compatible CAT transmitter (for example an SWT3-41-U-T) so send combined signals over the A+B port. |
| 38 | CAT A RJ-45 Port | Connect to a compatible CAT receiver (for example an EXT3-UE-R , EXT3-U-R). |
| 39 | CAT B RJ-45 Port | Connect to a compatible CAT receiver (for example an EXT3-UE-R , EXT3-U-R). |

Mounting SWT3-41-U-T, EXT3-UE-R, EXT3-U-R, and ACC3-12-SP

Mounting SWT3-41-U-T

This section provides instructions for mounting **SWT3-41-U-T**. Before installing, verify that the environment is within the recommended range:

- Operation temperature -0° to 40° C (32 to 104° F).
- Storage temperature -40° to $+70^{\circ}$ C (-40 to $+158^{\circ}$ F).
- Humidity 10% to 90%, RHL non-condensing.

Caution: Mount SWT3-41-U-T before connecting any cables or power.

Warning:

- Ensure that the environment (e.g., maximum ambient temperature & air flow) is compatible for the device.
- Avoid uneven mechanical loading.
- Appropriate consideration of equipment nameplate ratings should be used for avoiding overloading of the circuits.
- Reliable earthing of rack-mounted equipment should be maintained.
- Maximum mounting height for the device is 2 meters.

Mount SWT3-41-U-T in a rack:

 Use the recommended rack adapter (see www.kramerav.com/product/SWT3-41-U-T).

Mount SWT3-41-U-T on a surface using one of the following methods:

- Attach the rubber feet and place the unit on a flat surface.
- Fasten a bracket (included) on each side of the unit and attach it to a flat surface. For more information go to <u>www.kramerav.com/downloads/SWT3-41-U-T</u>.

Mounting EXT3-UE-R

This section provides instructions for mounting **EXT3-UE-R**. Before installing, verify that the environment is within the recommended range:

- Operation temperature -0° to 40° C (32 to 104° F).
- Storage temperature -40° to +70°C (-40 to +158°F).
- Humidity 10% to 90%, RHL non-condensing.

Warning:

- Ensure that the environment (e.g., maximum ambient temperature & air flow) is compatible for the device.
- Avoid uneven mechanical loading.
- Appropriate consideration of equipment nameplate ratings should be used for avoiding overloading of the circuits.
- Reliable earthing of rack-mounted equipment should be maintained.

• EXT3-UE-R must be placed upright in the correct horizontal position.

Mounting EXT3-UE-R

Mount device before connecting any cables or power.

To mount EXT3-UE-R

Mount the unit in a rack using the recommended rack adapter (see www.kramerav.com/product/EXT3-UE-R)

To mount the EXT3-UE-R on a table or shelf:

• Attach the rubber feet and place the unit on a flat surface.

• Fasten a bracket (included) on each side of the unit and attach it to a flat surface.

(i

For more information go to www.kramerav.com/downloads/EXT3-UE-Rr

Mounting EXT3-U-R

This section provides instructions for mounting **EXT3-U-R**. Before installing, verify that the environment is within the recommended range:

- Operation temperature 0° to 40° C (32 to 104° F).
- Storage temperature -40° to $+70^{\circ}$ C (-40 to $+158^{\circ}$ F).
- Humidity 10% to 90%, RHL non-condensing.

Caution:

• Mount EXT3-U-R before connecting any cables or power.

Warning:

- Ensure that the environment (e.g., maximum ambient temperature & air flow) is compatible for the device.
- Avoid uneven mechanical loading.
- Appropriate consideration of equipment nameplate ratings should be used for avoiding overloading of the circuits.
- Reliable earthing of rack-mounted equipment should be maintained.
- Maximum mounting height for the device is 2 meters.

Mount EXT3-U-R in a rack:

 Use the recommended rack adapter (see www.kramerav.com/product/EXT3-U-R).

Mount EXT3-U-R on a surface using one of the following methods:

- Attach the rubber feet and place the unit on a flat surface.
- Fasten a bracket (included) on each side of the unit and attach it to a flat surface. For more information go to <u>www.kramerav.com/downloads/EXT3-U-R</u>.

Mounting ACC3-12-SP

This section provides instructions for mounting ACC3-12-SP. Before installing, verify that the environment is within the recommended range:

- Operation temperature 0° to 40°C (32 to 104°F).
- Storage temperature -40° to +70°C (-40 to +158°F).
- Humidity 10% to 90%, RHL non-condensing.

Caution:

Mount ACC3-12-SP before connecting any cables.

Warning:

- Ensure that the environment (e.g., maximum ambient temperature) is compatible for the device.
- Avoid uneven mechanical loading.
- Reliable earthing of rack-mounted equipment should be maintained.

Mount ACC3-12-SP in a rack:

 Use the recommended rack adapter (see www.kramerav.com/product/ACC3-12-SP).

Mount ACC3-12-SP on a surface using one of the following methods:

- Attach the rubber feet and place the unit on a flat surface.
- Fasten a bracket (included) on each side of the unit and attach it to a flat surface. For more information go to www.kramerav.com/downloads/ACC3-12-SP.

Connecting SWT3-41-U-T

Always switch off the power to each device before connecting it to your **SWT3-41-U-T**. After connecting your **SWT3-41-U-T**, connect its power and then switch on the power to each device.

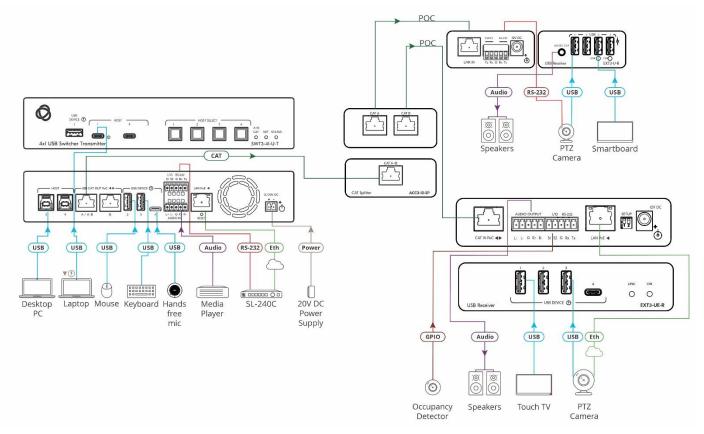

Figure 6: Connecting to the SWT3-41-U-T

In (<u>Figure 6</u>) **SWT3-41-U-T** is connected to dual receivers using a CAT splitter to save CAT cables wiring expenses. If not CAT splitter is required, **SWT3-41-U-T** can connect directly to either one of the required receivers **EXT3-UE-R** and **EXT3-U-R** based on needs.

To connect SWT3-41-U-T as illustrated in the example in Figure 6:

- Connect the HOST USB-C 3.1 (2) port to a laptop.
- Connect the HOST USB-B 3.1 (7) port to a room PC.
- Connect the local USB DEVICE ports 1, 10, 11 to USB devices (for example, USB DEVICE 2 to a mouse, USB DEVICE 3 to a keyboard and USB DEVICE 4 to a hands-free mic).
- Connect a balanced stereo audio source (for example, media player) to the AUDIO IN 5-pin terminal block connector⁽¹⁷⁾.
- 1. Connect the USB CAT OUT A / A+B PoC RJ-45 port (8) on the SWT3-41-U-T , to the CAT A+B Input RJ-45 port (36) on the ACC3-12-SP.

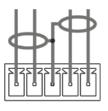

- 2. Connect the CAT A RJ-45 Output Ports (8) on the ACC3-12-SP, to the LINK IN RJ-45 ports (22) & (33) on the EXT3-UE-R and EXT3-U-R, correspondently.
- 3. Connect the Outputs on **EXT3-U-R** as follows:
 - Connect the USB DEVICE ports (31) to USB devices (for example, USB DEVICE 1 to a Touch TV, USB DEVICE 2 to a PTZ camera and USB DEVICE 3 to a smartboard).
 - Connect the AUDIO OUT 3.5mm mini jack (30) to an unbalanced stereo audio acceptor (for example, active speakers).
- 4. Connect the Outputs on EXT3-UE-R as follows:
 - Connect the USB DEVICE ports 18 to USB devices (for example, USB 1 to a touch TV, USB 3 to a PTZ camera).
 - Connect the AUDIO OUTPUT 5-pin terminal block connector (23) to a balanced stereo audio acceptor (for example, active speakers).
 - Connect the I/O 2-pin terminal block connector (24) to a triggering and/or triggered GPIO acceptor (for example, I/O 2 to occupancy detector) or a remote button (for example, a host selector).
- 5. Control the devices:

 - On EXT3-U-R receiver side, connect the RS-232 port ⁽¹⁶⁾ to a PTZ camera (send serial commands from SL-240C to the camera via receiver RS-232 port).
- 6. When not PoE powered, connect the power adapter to **SWT3-41-U-T** and to the mains electricity.

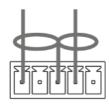

To charge the device that is connected to the host USB-C port, you need to use a power \mathbf{D}_{w} adapter for powering the SWT3-41-U-T switcher transmitter.

Connecting the Output to a Balanced/Unbalanced Stereo Audio Acceptor

The following are the pinouts for connecting the output to a balanced or unbalanced stereo audio acceptor:

L+ L- G R+ R-Acceptor

L+ L- G R+ R-Figure 7: Connecting to a Balanced Stereo Audio Figure 8: Connecting to an Unbalanced Stereo Audio Acceptor

Connecting a Balanced/Unbalanced Stereo Audio Source to the Balanced Input

The following are the pinouts for connecting a balanced or unbalanced stereo audio source to the balanced input:

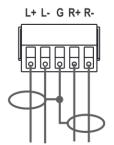

Figure 9: Connecting a Balanced Stereo Audio Source to the Balanced Input

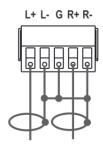

Figure 10: Connecting an Unbalanced Stereo Audio Source to the Balanced Input

Connecting to Devices via RS-232

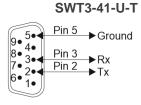

You can connect to **SWT3-41-U-T/ EXT3-UE-R/ EXT3-U-R** via an RS-232 connection using, for example, a PC.

SWT3-41-U-T, for example, features an RS-232 3-pin terminal block connector allowing the RS-232 to control **SWT3-41-U-T**.

Connect the RS-232 terminal block on the rear panel of **SWT3-41-U-T** to a PC/controller, as follows:

From the RS-232 9-pin D-sub serial port connect:

- Pin 2 to the TX pin on the SWT3-41-U-T RS-232 terminal block
- Pin 3 to the RX pin on the SWT3-41-U-T RS-232 terminal block
- Pin 5 to the G pin on the SWT3-41-U-T RS-232 terminal block

RS-232 Device

Operating and Controlling SWT3-41-U-T

Principles of Operation

This section covers the following topics:

- Flexible SWT3-41-U-T Auto Switching Policy on page 19.
- <u>Online Meeting Systems Integration</u> on page <u>19</u>.
- Routing IP-Driven Control Signals via Built-in Control Gateway on page 20.
- <u>Muting Extended Audio Signals</u> on page <u>21</u>.
- Flexible Remote Buttons Control on page 21.

Flexible SWT3-41-U-T Auto Switching Policy

Set the USB host switching to connected USB devices policy to:

- Manual Select a USB host manually and switching occurs whether a USB host live signal is present or not.
- Auto Auto Switching selection is performed in either Last Connected or Priority policy.

In Last Connected policy, if the signal on the current USB host is lost, **SWT3-41-U-T** automatically selects the last connected USB host. The auto-switching delay depends on the configurable signal-lost timeout.

In Priority policy, when the USB host sync signal is lost for any reason, the USB host with a live signal and next in priority is selected automatically. The auto-switching delay depends on the configurable signal-lost timeout. USB hosts priority is configurable; the default setting is USB-C 1 \rightarrow USB C 2 \rightarrow USB 3 \rightarrow USB 4.

See Setting the USB Auto-Switching Policy on page 30.

In both Last Connected and Priority modes, manually selecting a USB host (using the front panel, remote or web UI USB host select button) overrides automatic selection.

Online Meeting Systems Integration

i

USB device ports can be set to auto-disconnect following presenter disconnection, to allow smooth integration and auto-activation of connected online meeting room systems.

See Auto-disconnecting a USB Device on Inactive Host on page 36.

Routing IP-Driven Control Signals via Built-in Control Gateway

Remote IP connected clients can communicate and control (send commands, and receive responses and notifications) via the LAN:

- IP commands/responses via the LAN-connected **SWT3-41-U-T** and CAT-connected EXT3-UE-R LAN extension, to/from the EXT3-UE-R LAN-connected devices.
- Via the SWT3-41-U-T built-in and I/O control gateway:
 - RS-232 commands, to control devices connected to SWT3-41-U-T, EXT3-UE-R and EXT3-U-R RS-232 control ports. The built-in control gateway sends the serial control commands (converted from the client received IP messages) to the locally and/or remotely connected serially controlled devices and distributes their received responses to all connected clients.
 - Send or receive I/O digital triggers or detected triggers, to I/O control devices connected to SWT3-41-U-T and EXT3-UE-R I/O control ports. The built-in control gateway sends the I/O control commands (converted from the client received IP messages) to the locally and/or remotely connected I/O controlled devices and distributes their received detected triggers to all connected clients.

EXT3-UE-R I/O ports control and management via LAN is done via **SWT3-41-U-T** LAN connection and web-UI only.

(Figure 11) shows the SWT3-41-U-T built-in control gateway connection for control of its local and remote EXT3-UE-R control ports. The Kramer Control controller is connected to the switcher via LAN, sends IP commands to the switcher control gateway over the LAN connection, to send control messages to, and receive control responses from:

- The PTZ Camera connected to the EXT3-U-R receiver via the RS-232 port.
- The PTZ Camera connected to the EXT3-UE-R receiver via the LAN.
- The Occupancy Detector connected to the EXT3-UE-R receiver via the I/O ports.
- The Soundbar is connected to receiver EXT3-UE-R via the RS-232 port.
- The Blinds are locally connected to SWT3-41-U-T via the I/O ports.

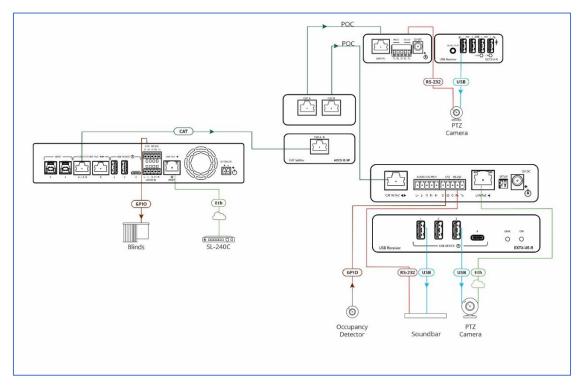

Figure 11: Controlling remotely via SWT3-41-U-T Control Gateway

Muting Extended Audio Signals

Sterio audio signal is extended from the switcher transmitter to both receivers, to allow easy audio and music distribution within the same space or separate rooms. Each extended audio signal can be independently muted, to enable a simple end-user control on the distributed audio signals.

See <u>Muting the Extended Audio Signal</u> on page <u>29</u>.

Flexible Remote Buttons Control

Remote contact-closure buttons can be connected to the I/O ports, for easy end user control of device functions by button press and release operation. Flexible configuration of button press/release actions and latching (default) or momentary operation mode, enable simple and custom control according to user needs.

See Configuring Remote Buttons on page 48.

Using Front Panel Buttons

SWT3-41-U-T front and rear panel buttons enable the following actions:

- Selecting a HOST INPUT.
- Resetting device to its factory settings (for additional instructions on resetting and resetting device (see <u>Resetting and Restarting Device</u> on page <u>34</u>).

Operating via Ethernet

You can connect to SWT3-41-U-T via Ethernet using either of the following methods:

- Directly to the PC using a crossover cable (see <u>Connecting Ethernet Port Directly to a</u> <u>PC</u> on page <u>22</u>).
- Via a network switch or router, using a straight-through cable (see <u>Connecting Ethernet</u> <u>Port via a Network Hub or Switch</u> on page <u>24</u>).

(j

If you want to connect via a router and your IT system is based on IPv6, speak to your IT department for specific installation instructions.

Connecting Ethernet Port Directly to a PC

You can connect the Ethernet port of **SWT3-41-U-T** directly to the Ethernet port on your PC using a crossover cable with RJ-45 connectors.

This type of connection is recommended for identifying **SWT3-41-U-T** with the factory configured default IP address.

After connecting **SWT3-41-U-T** to the Ethernet port, configure your PC as follows:

- 1. Click Start > Control Panel > Network and Sharing Center.
- 2. Click Change Adapter Settings.
- 3. Highlight the network adapter you want to use to connect to the device and click **Change** settings of this connection.

The Local Area Connection Properties window for the selected network adapter appears as shown in Figure 12.

| 🖟 Local Area Connection Properties |
|---|

Connecting Ethernet Port via a Network Hub or Switch

You can connect the Ethernet port of **SWT3-41-U-T** to the Ethernet port on a network switch or router using a straight-through cable with RJ-45 connectors.

Configuring Ethernet Port

You can set the Ethernet parameters via the embedded Web pages.

Discovering and acquiring IP address

SWT3-41-U-T includes IP address auto-acquiring policy via LAN-connected DHCP server by default. When no DHCP server is detected, a fallback static IP address of 192.168.1.39, and 255.255.255.0 subnet mask (class C), is assigned until an IP address is acquired via the DHCP server.

For more information, refer to Product Page Technical Note in www.kramerav.com/product/SWT3-41-U-T

Using Embedded Web Pages

SWT3-41-U-T enables you to configure settings via Ethernet using built-in, user-friendly web pages. The Web pages are accessed using a Web browser and an Ethernet connection.

You can also configure **SWT3-41-U-T** via Protocol 3000 commands (see <u>Protocol 3000</u> <u>Commands</u> on page <u>64</u>).

Before attempting to connect:

- Perform the procedure in (see <u>Operating via Ethernet</u> on page <u>22</u>).
- Ensure that your browser is supported.

| Operating Systems | Browser |
|-------------------|---------|
| Windows 7 | Chrome |
| Windows 10 | Edge |
| | Chrome |
| Мас | Safari |
| iOS | Safari |
| Android | N/A |

The following operating systems and Web browsers are supported:

If a web page does not update correctly, clear your Web browser's cache.

Check that Security/firewalls are not blocking HTTP traffic between the device and the user PC.

To access the web pages:

1. Enter the IP address of the device in the address bar of your internet browser (default = 192.168.1.39).

If security is enabled, the Login window appears.

Figure 18: Pages and Tabs Navigable List

4. Click the Navigation Pane on the left side of the screen to access the relevant web page.

SWT3-41-U-T web pages enable performing the following actions:

- <u>Operation</u> on page <u>29</u>.
- <u>Settings</u> on page <u>30</u>.
- Diagnostics on page 50.
- Administration on page 50.
- <u>Viewing the About Page</u> on page <u>56</u>.

Operation

Routing Signals

This section details the following actions:

- <u>Routing a Host to Devices</u> on page <u>29</u>.
- Muting the Extended Audio Signal on page 29.

Routing a Host to Devices

Route any of the four USB hosts to all connected USB-C devices.

To route the Host to the Devices:

1. Go to the Routing Settings tab.

| Ro | uting | |
|--------------------------------------|---------------------|---------------------|
| | | Devices |
| | | USB-C USB Device |

| CAL | | |

Figure 19: Routing Page

- 2. Perform the following functions:
 - Click a Host/Devices cross-point.

A green light button indicates a connected source.

A host is routed to the devices.

Muting the Extended Audio Signal:

This feature only works when SWT3-41-U-T is connected to a receiver(s).

To mute the extended audio signal:

- 1. Go to the Routing Settings tab.
- 2. Next to CAT-A /B Audio Mute press to toggle switch to ON.

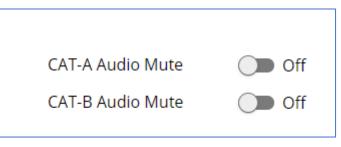

Figure 20: Muting Extended Audio Signals

Extended audio signal is muted.

Settings

This section details the following action:

- <u>USB Switching Properties</u> on page <u>30</u>.
- <u>Device Properties</u> on page <u>31</u>.
- <u>Settings Networking Properties</u> on page <u>36</u>.
- <u>Control Gateway Properties</u> on page <u>38</u>.

USB Switching Properties

This section details the following action:

• <u>Setting the USB Auto-Switching</u> Policy on page <u>30</u>.

Setting the USB Auto-Switching Policy

To set the USB auto-switching policy:

- 1. Go to the Auto switching tab.
- 2. Next to the Selection Mode drop-down box, select the auto switching policy: **Manual**, **Last Connected** or **Priority**.

USB auto-switching policy is set.

To change USB Host Input Priorities:

- 1. Go to the Auto switching tab.
- 2. Next to the Selection Mode drop-down box, select Priority.

3. Click and drag a host input between high and low to change the priorities.

| Selection Mode | Manual | | |
|--------------------|-----------|-------|-------|
| High | A | | Low |
| USB-C 1 | USB-C 2 | USB 3 | USB 4 |
| Drag to change the | priority. | | |

Figure 21: Changing Input Priorities

4. Click SET USB.

USB Host Input priorities are set.

Device Properties

This section details the following actions:

- <u>Device Profile and Maintenance</u> on page <u>32</u>.
- <u>Changing Device Name</u> on page <u>32</u>.
- <u>Upgrading Firmware</u> on page <u>33</u>.
- <u>Resetting and Restarting Device</u> on page <u>34</u>.
- Identifying Your Device on page <u>35</u>.

Device Profile and Maintenance

Changing Device Name

SWT3-41-U-T enables you to change the DNS name of the device.

To change the device name:

1. Go to the Device > General tab.

| Kramer | SWT3-41-U-T | | | |
|----------|------------------------|-------------------------|---------|-----------------|
| » | Device > General | | | |
| •• | 🗘 General | 💮 Network | v‡ USB | 🐻 Time and Date |

| | FACTORY RESET | IMPORT | | |
| | | | | |

Figure 22: Device > General Page

2. Under General Preferences, change the device name and click **SAVE**.

The device name is changed.

Upgrading Firmware

Ĭ

To upgrade the device firmware:

- 1. Go to the **Device** > **General** tab (<u>Figure 22</u>).
- 2. Under General, click **Update**, open the relevant firmware file, and follow the instructions. The upgrade process (Figure 23) takes approximately 30-60 seconds.
 - During FW upgrade, the device continues to operate, but the device UI and protocol 3000 communication are inactive. When device restarts, the status LED is lit and USB host and devices connection signal is disconnected until restart completes.

Firmware is updated.

Figure 23: Firmware Upgrade Process

Enabling Combined Dual CAT A+B Mode

The **SWT3-41-U-T** enables you to connect it to a compatible CAT receiver (**EXT3-UE-R**) or compatible CAT splitter (**ACC3-12-SP**). When you select Combine Dual CAT A+B, the **SWT3-41-U-T** sends combined signals over the A+B Port.

Any device connected to the CAT B Port will not function while this feature is active.

To configure Dual CAT A+B Mode

- 1. Go to the **Device** > **General** tab (<u>Figure 22</u>).
- 2. Next to Combine Dual CAT A+B, press to toggle On.

3. Click SAVE.

Dual CAT A+B Mode indication is displayed on the top bar.

| Kramer SWT3-41-U-T | | Dual Mode CAT A+B |
|------------------------------|----------------------|-------------------------|
| ✓ OPERATION | Device > General | |
| Routing | 🔅 General | 🔀 Network 🖞 USB |

| 🚆 Device | Model | SWT3-41-U-T |
| 👯 Control gateway | Serial Number | 0 |
| ✓ DIAGNOSTICS ☑ Status | Firmware Version | 1.0.64637 <u>Update</u> |
| | Combine Dual CAT A+B | On |

Figure 24: Device Settings > Dual Mode CAT A+B

Dual CAT A+B Mode is enabled.

Resetting and Restarting Device

Two types of resets can be performed:

- Restart Reboots your device and keeps all your device settings, including the IP address and password.
- Reset Reboots your device and restores all factory settings including input/output definitions, switching configuration, IP address and password (a DHCP-acquired IP address is retained).

To restart the device:

Click DEVICE RESTART on the Device > General page (Figure 22).

To perform a factory reset on the device, use one of the following actions:

- Click FACTORY RESET on the Device > General page (Figure 22).
- Using protocol 3000 commands, send FACTORY command then RESET commands.
- On the rear panel, press and hold the RESET button while connecting the power for several seconds.

Exporting and Importing a Configuration File

SWT3-41-U-T enables you to export and store (in connected browsing PC storage) a configuration file, that records all current device settings except the routing operation setup. The stored file can then be imported to the same or different **SWT3-41-U-T** device to load the recorded settings, for configuration backup and/or solution-replication purposes.

Exporting a Configuration File

To export a configuration file of the current device settings:

- 1. Go to the **Device** > **General** page (<u>Figure 22</u>).
- 2. Under Global System Settings, click **EXPORT**.
- 3. Select the storage location on your computer to save the configuration file and click **SAVE**.

The configuration file is exported and saved.

Importing a Configuration File

To import a configuration file of the current device settings:

- 1. Go to the **Device** > **General** page (Figure 22).
- 2. Under Global System Settings, click IMPORT.
- 3. Select the relevant configuration file from your computer storage and click **SAVE**.

The configuration file is imported and the device restarts with the settings from the configuration file.

Identifying Your Device

To identify the device using a supporting discovery system:

- 1. Go to the **Device** > **General** page (<u>Figure 22</u>).
- 2. Under Global System Settings, click FLAG ME. NET LED flashes.

The device is identified by the discovery system.

Settings Networking Properties

By default, DHCP is set to on. The IP address shows the actual IP address acquired from the DHCP server, or the auto-acquired fallback IP address when there is no DHCP server detection.

To configure network settings:

- 1. Go to the **Device** > **General** page (<u>Figure 22</u>).
- 2. Select the **Network** tab.

The network page appears.

| | Device > Network | |
|-------------------|---|---|
| 🕲 Network | 🗘 General | 🔀 Network |
| | DUCD | Off |
| on 🖉 | DHCP | |
| 00-1d-56-02-ee-c5 | MAC Address | 00-1d-56-02-ee-c5 |
| 192,168,57,80 | IP Address | 192.168.57.80 |
| 255,255,0,0 | Mask Address | 255.255.0.0 |
| 192,168, 0,254 | Gateway Address | 192.168.0.254 |

Figure 25: Device Settings > Network Page (DHCP On/DHCP Off)

3. Change settings as needed.

If required, Set to **DHCP** (default) or static IP address resolution modes.

- 4. When in Static IP mode, perform the following actions:
 - Change the IP address.
 - Change the Mask address.
 - Change the Gateway address.
 - Define UDP/TCP port numbers.

Network settings are defined.

Auto-disconnecting a USB Device on Inactive Host

When a host becomes inactive, you can automatically disconnect one or multiple USB devices.

To define auto-disconnection:

- 1. Go to the **Device** > **General** page (<u>Figure 22</u>).
- 2. Select the USB tab.

| Ø | kramer | SWT3-41-U-T |
|---------------|--------|---|
| » | | Device > USB |
| 唯 一 | | 🗘 General 🛞 Network 🕂 USB |

| • | | Device Port |
| | | Local 1 On CAT-A 2 On CAT-B |
| | | 3 O n |
| | | 4 💽 On |
| | | <u>All Off</u> <u>All On</u> |

Figure 26: USB Page – USB Device Auto-Disconnection

- 3. For each USB Device Port, select the **Local** device ports on the **SWT3-41-U-T**; or select **CAT-A** / **CAT-B** for the devices located on the paired receivers.
 - set the auto disconnection status to On or Off. You can also Select All Off or All On to set all device ports to off or on, respectively.
- 4. Click SAVE.

USB devices are set for connected devices on local transmitter or remote receivers.

Setting Time and Date

You can sync the device time and date to any server around the world.

To sync device time and date to a server:

- 1. In the Navigation pane, click **Device**. The General tab in the Device page appears.
- 2. Select the **Time and Date** tab. The Time and Date tab appears.

| kramer | SWT3-41-U-T | | | |
|----------|--|---------------------------------|---------|-----------------|
| » | Device > Time and Date | | | |
| | 🛱 General | 🛞 Network | ប៉ំ USB | 📷 Time and Date |

| <u>_</u> | Time Location | (GMT+00:00) Greenwic • | | |
| • | Daylight Savings Time | Yes No | | |
| - | Use Time Server (NTP) Time Server Address | • off 129 _ 6 _ 15 _ 30 | | |
| Ŭ | Server Status | Unreachable | | |
| | Sync Every Day at (0-23) | <u>0</u> | | |
| | | | | |

Figure 27: Device Settings - Time and Date Tab

- 3. Set the Date and Time.
- 4. Select the Time Location.
- 5. In the Use Time Server (NTP) drop-down box, click:
 - Disabled to disable the time server.
 - Manual to enable time server (NTP).
- 6. If enabled, type in server information:
 - Enter the time server address.
 - Set sync frequency (every 0 to 23 days).
- 7. Click **SAVE** for any change.

The devices date and time are synchronized to the server address entered.

Control Gateway Properties

This section details the following actions:

- <u>Setting Serial Port Properties</u> on page <u>39</u>.
- <u>Configuring Local I/O (GPIO) Ports</u> on page <u>42</u>.
- <u>Configuring a Digital Output I/O Type</u> on page <u>44</u>.
- <u>Configuring Remote Receiver I/O (GPIO) Ports</u> on page <u>46</u>.
- <u>Defining and Testing Commands via Action Editor</u> on page <u>47</u>.

• <u>Configuring Remote Buttons</u> on page <u>48</u>.

Setting Serial Port Properties

SWT3-41-U-T enables configuring the RS-232 port in one of the following ways:

- <u>Controlling the SWT3-41-U-T</u> on page <u>39</u>.
- Controlling a Local External Device on page <u>40</u>.
- Extending Local RS-232 Port to Remote Receiver RS-232 Port on page 41.
- Controlling Remote Devices Connected to the Receiver on page 42.

Controlling the SWT3-41-U-T

To set the RS-232 port to control the device:

1. Go to the Control Gateway tab. The Serial Ports tab appears.

| 🚫 kramer | SWT3-4 | 1-U-T | | | |
|------------------|-----------------|----------------------|---------|---------------|-----------------|
| » | Control gateway | v > Serial Ports | | | |

| | | Data Bits | 8 | - | |
| | | Baud Rate | 115200 | Ŧ | |
| | | Stop Bits | 1 | - | |
| | | | | | |

Figure 28: RS-232 for Device Control

- 2. Next to Function, select **Control**.
- 3. Click SAVE.

RS-232 port controls the SWT3-41-U-T.

Controlling a Local External Device

Control a locally connected external device via an IP-connected Controller (for example SL-240C that is connected via LAN)

To set the RS-232 port to control an external device:

- 1. Go to the Control Gateway tab. The Serial Ports tab appears.
- 2. Next to Function, select Gateway.

| Kramer | SWT3-41 | I-U-T | | | | |
|------------|-----------------|------------------------|---------|-----------|--------|-----------|
| » | Control gateway | > Serial Ports | | | | |

| | | Stop Bits | 1 | | - | |
| | | | | | | |

Figure 29: Gateway control of local RS-232 port

- 3. Define the external device RS-232 settings (Parity, Data Bits, Baud Rate and Stop Bits).
- 4. Click Save.

The Advanced Settings tab appears.

- 5. Select either UDP or TCP port.
- 6. Click SAVE.

RS-232 port controls locally connected external device via gateway.

Extending Local RS-232 Port to Remote Receiver RS-232 Port

Enable RS-232 port extension over CAT link with bi-directional serial communication.

To set the local RS-232 port extension to the receiver RS-232 port

- 1. Go to the Control Gateway page. The Serial Ports tab appears.
- 2. Next to Function, select **Extension**.

| Kramer | SWT3-4 | 1-U-T | | | | |
|------------|-----------------|----------------------|----------|--------------|----------|-----------|

Figure 30: Local RS-232 port extension

- 3. Define the RS-232 communication settings (Parity, Data Bits, Baud Rate and Stop Bits).
- 4. Select link of paired receiver (CAT Link A / B).
- 5. Click **SAVE**.

RS-232 port extension with bi-directional communication is enabled.

Control an external device, remotely connected to the receiver, via an IP-connected Controller to SWT3-41-U-T (for example **SL-240C** that is connected via LAN).

To set the receiver RS-232 port to control a connected external device:

- 1. Go to the Control Gateway page. The Serial Ports tab appears.
- 2. In the left-hand side of the screen, select CAT-A or CAT-B.
- 3. Next to Function, select Gateway.

| Ø | kramer | SW | ГЗ-41-U-Т | | | |

Figure 31: Gateway control of remote receiver RS-232 port

- 4. Define the paired-receiver RS-232 settings (Parity, Data Bits, Baud Rate and Stop Bits).
- 5. Click **SAVE**.

RS-232 port controls via gateway a remote external device connected to the receiver RS-232 port.

Configuring Local I/O (GPIO) Ports

The 2 local I/O ports can control devices such as sensors, door locks, remote contact-closure buttons, audio volume and lighting control devices and can be configured via the webpages.

To enable I/O operations, Remote Button must be set to Off.

To configure an I/O port:

- 1. In the Navigation pane, click **Control Gateway**. The Serial Ports tab in the Device Settings page appears.
- 2. Select the IO tab. The IO tab appears.

| Serial P | orts 10 | >Ξ Acti | on Editor | | | |
|--|------------------------|--------------|---------------|------------|-----------|----|
| 01 | IO 1 PROPERTIES | | | | | |
| CONTRACTOR OF A DESCRIPTION OF A DESCRIP | | | | | | |
| AT-A IO 1 | Remote Button 🔵 Off | | | | | |
| AT-A 10 2 | State ON | State OFF | | | | |

| | Pull-up Resistor | Disabled | | | | |
| | Threshold VDC Range | Low: 800 | \$ | High: | 2200 | \$ |
| | Read Current Step: Low | Voltage: 0mV | | | | |

Figure 32: Local I/O ports settings tab - Digital Input Type

- 3. Select the local I/O port to be configured (IO 1 or IO 2).
- 4. Select one of the following I/O types:
 - Digital Input (default setting) (see <u>Configuring a Digital Input I/O Type</u> on page <u>43</u>).
 - Digital Output (see <u>Configuring a Digital Output I/O Type</u> on page <u>44</u>).
 - Analog Input (see <u>Configuring an Analog Input I/O Type</u> on page <u>45</u>).

The settings available on the page change depending on which trigger type is selected.

5. Click **SAVE** after setting the selected I/O type.

Configuring a Digital Input I/O Type

The Digital Input trigger mode reads the digital input of an external sensor device that is connected to the I/O port. It detects High (upon passing Max threshold from Low state) or Low (upon passing Min threshold from High state) port states according to the user defined voltage threshold levels.

To configure a digital input I/O type:

 On the IO tab, select **Digital Input** next to I/O Type. The Digital Input options appear.

- 2. Select one of the following for the Pull-up resistor setting:
 - Disabled

Suitable, for example, for a high temperature alarm that exceeds the maximum voltage threshold. When the pull-up resistor is disabled, the port state is low and to be triggered it must be pulled high by the externally connected sensor.

- Enabled Detection of an open circuit as High, or a short to ground as Low. This is suitable for example, for a pushbutton switch (connecting one terminal of the switch to ground, and the other to the input) or for an alarm closing a circuit that activates a series of actions. When the pull-up resistor is enabled, the port state is high, and to be triggered it must be pulled low by the externally connected sensor.
- 3. Set the Threshold VDC Low and High Range (threshold voltage at which the port changes state).
- 4. Click Read to refresh port status information.
- 5. Click SAVE.

Digital input I/O type is configured.

Configuring a Digital Output I/O Type

To configure a digital output I/O type:

 On the IO tab, select Digital Output next to I/O type. A warning message appears.

| 🛕 Warning | | |
|--|---------------------------|--|
| When selecting Digital Output and the pull-up resistor is | disabled,you must install | a current-limiting resistor to prevent damage to the port. |
| | | |
| | | |
| | ОК | |
| | | |

Figure 33: Digital Output Warning

2. Make sure to follow the instructions in this warning.

3. Click **OK**. The Digital Output options appear.

| Serial P | orts 1 | <u>o</u> 10 | >∃ Actio | n Editor | |

| CAT-B IO 2 | | | | | |
| | I/O Type | | Analog Input | Digital Input | Digital Output |
| | Pull-up Resisto | r | Disabled | | |
| | Current Status | | Low | | |

Figure 34: GPIO Settings Page – Digital Output I/O Type

4. Select one of the following for the Pull-up resistor setting:

• Pullup resistor set to Enabled:

The port can be used for controlling devices that accept a TTL signal such as for powering LEDs. The voltage output is TTL positive logic: high: >2.4V; low: < 0.5V. When the pull-up resistor is enabled, the port state is high. For the state to be low, you must select **Low** for the Current Status.

Pullup resistor **Disabled**:

The port is used for controlling external devices such as room or light switches. The external source device determines the voltage output; the maximum voltage is 30V DC and the maximum current is 100mA.

When the pull-up resistor is disabled, the port state is low. For the state to be high, select **High** for the Current Status.

Make sure that the current in this configuration does not exceed 100mA.

5. Click SAVE.

Digital Output I/O type is configured.

Configuring an Analog Input I/O Type

When selectin the Analog Input I/O type, the port is triggered by an external analog device, such as a volume control device. The trigger is activated once when the detected voltage is within the 0 to 30V DC voltage range.

To configure an analog input I/O type:

1. On the I/O tab, select Analog Input next to I/O type.

| Serial P | orts | 1 <u>0</u> IO | >= Actio | on Editor |
|--------------------------|------------------|-----------------|-------------------|------------------------------|
| <u>IO 1</u> | IO 1 PRO | OPERTIES | | |
| IO 2 CAT-A IO 1 | Remote I | Button 🗩 Off | | |
| CAT-A IO 2 CAT-B IO 1 | State ON None | - | State OFF None | - 🗌 Momentary |
| CAT-B IO 2 | | | | |
| | I/О Туре | | Analog Input | Digital Input Digital Output |
| | Maximur | n Reported Step | S: 1 | * |

Figure 35: Local I/O ports settings tab - Analog Input Type

- Enter or use the arrows to scroll to a value (1–100) for the Maximum reported steps. This value is the number of steps that the analog input signal is divided into. To calculate the voltage of each step, use the following formula: Voltage of one step = 30V / number of steps.
- 3. Click SAVE.

Analog input I/O type is configured.

Configuring Remote Receiver I/O (GPIO) Ports

The 4 remote I/O ports, on the paired receivers, can control devices connected to a receiver, such as sensors, door locks and lighting control devices, and can be configured via SWT3-41-U-T webpages.

To configure an I/O port:

1. In the Navigation pane, click **Control Gateway**. The Serial Ports tab in the Device Settings page appears.

2. Select the IO tab. The IO tab appears.

| IO 1 | IO 2 PROPERTIES |
|-------------------|---|
| IO 2 | |
| CAT-A IO 1 | I/O Type Digital Input Digital Output |
| <u>CAT-A IO 2</u> | |
| CAT-B IO 1 | Pull-up Resistor Disabled |
| CAT-B IO 2 | Threshold VDC Range Low: 800 High: 2200 |
| | Read Current Step: High |
| l | |
| | |

Figure 36: I/O Ports Settings Page

- 3. Select the CAT-A or CAT-B I/O port to be configured (IO 1 or IO 2).
- 4. Select one of the following I/O types:
 - Digital Input (default setting) (see <u>Configuring a Digital Input I/O Type</u> on page <u>43</u>).
 - Remote buttons are not configurable on remote I/O ports.
 - To Configure Remote buttons, refer to <u>Configuring Remote Buttons</u> on page <u>48</u>.
 - Digital Output (see <u>Configuring a Digital Output I/O Type</u> on page <u>44</u>).
- 5. Click **SAVE** after setting the selected I/O type.

Defining and Testing Commands via Action Editor

Use action editor to create and test control commands via RS-232 control interfaces. You can create up to 5 commands.

To add an action:

1. In the navigation pane, select **Control Gateway**. The Serial Ports tab opens.

2. Select the Action Editor tab. The Action Editor appears.

| Control gateway > Action | Editor | |
|--------------------------|--|---|
| Serial Ports | 1010 | > Action Editor |
| Command01 Command01 | ACTION PROPERTIES | s |
| Command01 Command01 | Command Id | 0 |
| Custom Cmd 5 | Command Name | Command01 |
| | Port | |
| | Command 02,03, | |
| | 444 characters left Syntax (like CEC-SND o RUN COMMAND | command): <port_num>, <cmd_id>, <cmd_name>, <len>, <cec_command></cec_command></len></cmd_name></cmd_id></port_num> |

Figure 37: Action Editor Tab

- 3. Select a command name on the left side of the window.
- 4. Change the command name, if required.
- 5. Select the port (UART).
- 6. Enter the appropriate command line (see example below) to have NET LED blink for 60 seconds:
 - For RS232 1,#IDV
- 7. Click **SAVE**.
- 8. Click **RUN COMMAND** to run the command test.

An action is entered and can be run.

Configuring Remote Buttons

Remotely operate, by I/O-connected remote buttons, configured control actions (see (see <u>Defining and Testing Commands via Action Editor</u> on page <u>47</u>).

To Configure Remote Buttons:

- 1. In the Navigation pane, click **Control Gateway**. The Serial Ports tab in the Device Settings page appears.
- 2. Select the IO tab. The IO tab appears.
- 3. Press to toggle **Remote Button** to On.
- 4. Configure defined control actions, for button on/off states, using the **State ON**, **State OFF** drop-down boxes.

 Button default operation mode is latching. For momentary mode, check the Momentary checkbox.

| Seria | l Ports | 1 <u>0</u> IO | >= Actio | on Editor | |
|--|----------------------------|-----------------|-------------------|---------------|----------------|
| <u>IO 1</u> | IO 1 PR | OPERTIES | | | |
| IO 2 CAT-A IO 1 CAT-A IO 2 CAT-B IO 1 | Remote State ON None | Button 🗩 Off | State OFF None | • [] | Momentary |
| CAT-B IO 2 | І/О Туре | | Analog Input | Digital Input | Digital Output |
| | Maximu | m Reported Step | s: 1 | * | |

Figure 38: I/O ports settings tab - Configuring Remote Buttons

5. Click **SAVE**.

A control actions remote button can now be remotely operated.

Diagnostics

Viewing Device Status

View the device status.

To view the device status:

- 1. In the navigation pane, select Status.
- 2. Select the **Devices** tab. The Devices Status appears.

Device status can be viewed.

Administration

Setting Security Properties

This section details the following actions:

- Changing Security Status on page 51.
- <u>Defining 802.1X Authentication</u> on page <u>52</u>.

Changing Security Status

By default, security status is set to On.

Setting Security Status to Off

To set security status to Off:

- 1. Go to the Security page (Figure 40).
- 2. Select the Security tab. The Security settings appears.

| Kramer | SWT3-41-U-T | | |
|----------|---------------------|-----------|---------------|
| » | Security > Security | | |
| •t# | Security | () 802.1X | |
| 4.mo | SECURITY STATUS | on | |
| | Current Password | | <u>Change</u> |
| <u>_</u> | | | |
| • | | | |

Figure 40: Security – Security Tab

3. Set **SECURITY STATUS** to **Off**. The Security Status window appears.

| Security Status Would you like to disable security? | | |
|--|----|--|
| Enter password to disable the security. | | |
| | | |
| CANCEL | ОК | |

Figure 41: Security Status Message

- 4. Enter the current password.
- 5. Click **OK**.

Security status is set to Off.

Setting Security Status to On

To set security status to on:

- 1. Go to the Security > Security (Figure 40).
- 2. Set SECURITY STATUS to On.

Security status is set to On.

Changing Web Pages Access Password

To change the password for accessing the embedded web pages:

- 1. Go to the Security page (Figure 22).
- 2. Select the Security Tab. The Security settings appear (Figure 42).
- 3. Enter the Current Password and click **Change**. The new password settings appear.

| SECURITY STATUS | On | |
|------------------|-------|---------------|
| Current Password | ••••• | <u>Change</u> |
| New Password | |] |
| Confirm Password | |] |
| | | |
| | | |
| CANCEL | | |

Figure 42: Device Settings – Changing the Password

4. Enter the new password and confirmation password and click SAVE.

The password is changed.

Defining 802.1X Authentication

802.1x security standard supports IT networking authentication based on LAN port and MAC address.

To configure security:

- 1. In the Navigation pane, click **Security**. The Security settings tab in the Security page appears.
- 2. Select 802.1X tab. The 802.1X settings tab appears (see Figure 43).

| Q | kramer | SWT3-41-U- | T |
|----|--------|--------------------|--------------|
| » | | Security > 802.1X | |
| •4 | | Security | 0 802.1X |
| | | | ~ |
| | | IEEE 802.1X AUTHEN | TICATION Off |
| ŧŧ | | | |

Figure 43: 802.1X Tab

- 3. For 802.1x authentication, click **ON** to enable 802.1x authentication service. 802.1x supports authentication based on port and MAC address.
- 4. When set to ON check one standard authentication method to set its security attributes.
 - PEAP-MSCHAP V2 (Figure 44) Enter:
 - Username up to 24 alphanumeric characters, including "_" and "-" characters within the username, and
 - · Password up to 24 ASCII characters

Figure 47: EAP-TLS – Certificates and Password

5. Click APPLY.

802.1x authentication security is configured.

Viewing the About Page

View the firmware version and Kramer Electronics Ltd details in the About page.

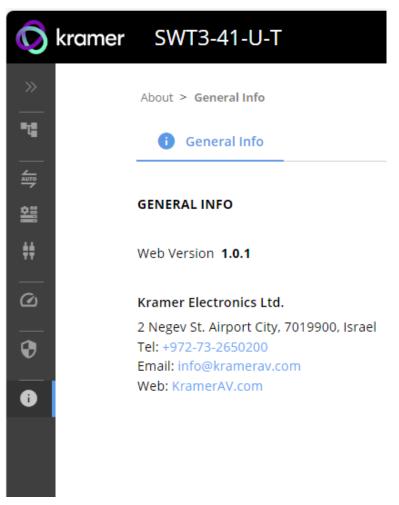

Figure 48: About Page

Upgrading Firmware

Use the Kramer **K-UPLOAD** software to upgrade the firmware via ethernet or the RS-232 port, allowing RS-232 to control/program the device). The device continues to operate and once FW upload complete, you are asked to Restart no or later.

The latest version of **K-UPLOAD** and installation instructions can be downloaded from our website at: www.kramerav.com/support/product_downloads.asp.

 (\mathbf{i})

Note that in order to use the micro USB port, you need to install the Kramer USB driver, available at: www.kramerav.com/support/product_downloads.asp.

Protocol 3000

Kramer devices can be operated using Kramer Protocol 3000 commands sent via serial or Ethernet ports.

Understanding Protocol 3000

Protocol 3000 commands are a sequence of ASCII letters, structured according to the following.

Command format:

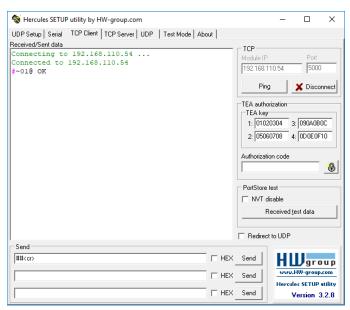

| Prefix | Command Name | Constant (Space) | Parameter(s) | Suffix |
|--------|--------------|------------------|--------------|-----------|
| # | Command | L | Parameter | <cr></cr> |

• Feedback format:

| Prefix | Device ID | Constant | Command Name | Parameter(s) | Suffix |
|--------|-----------|----------|--------------|--------------|--------------------|
| ~ | nn | Q | Command | Parameter | <cr><lf></lf></cr> |

- Command parameters Multiple parameters must be separated by a comma (,). In addition, multiple parameters can be grouped as a single parameter using brackets ([and]).
- **Command chain separator character** Multiple commands can be chained in the same string. Each command is delimited by a pipe character (|).
- **Parameters attributes** Parameters may contain multiple attributes. Attributes are indicated with pointy brackets (<...>) and must be separated by a period (.).

The command framing varies according to how you interface with **SWT3-41-U-T**. The following figure displays how the # command is framed using terminal communication software (such as Hercules):

Protocol 3000 Commands

| Function | Description | Syntax | Parameters/Attributes | Example |
|-------------------------|---|--|---|--|
| # | Protocol handshaking. | COMMAND | | # <cr></cr> |
| | | # <cr></cr> | | |

| Function | Description | Syntax | Parameters/Attributes | Example |
|----------|----------------------|---|-------------------------------|-------------------------|
| VERSION? | Get firmware version | COMMAND | firmware version - XX.XX.XXXX | Get the device firmware |
| | number. | #VERSION?_ <cr></cr> | where the digit groups are: | version number: |
| | | FEEDBACK | major.minor.build version | #VERSION? < |
| | | ~nn@VERSION_firmware_version <cr><lf></lf></cr> | | |

Result and Error Codes

Syntax

In case of an error, the device responds with an error message. The error message syntax:

- ~NN@ERR XXX<CR><LF> when general error, no specific command
- ~NN@CMD ERR XXX<CR><LF> for specific command
- NN machine number of device, default = 01
- XXX error code

Error Codes

| Error Name | Error Code | Description |
|----------------------------|---------------|---|
| P3K_NO_ERROR | 0 | No error |
| ERR_PROTOCOL_SYNTAX | 1 | Protocol syntax |
| ERR_COMMAND_NOT_AVAILABLE | 2 | Command not available |
| ERR_PARAMETER_OUT_OF_RANGE | 3 | Parameter out of range |
| ERR_UNAUTHORIZED_ACCESS | 4 | Unauthorized access |
| ERR_INTERNAL_FW_ERROR | 5 | Internal FW error |
| ERR_BUSY | 6 | Protocol busy |
| ERR_WRONG_CRC | 7 | Wrong CRC |
| ERR_TIMEDOUT | 8 | Timeout |
| ERR_RESERVED | 9 | (Reserved) |
| ERR_FW_NOT_ENOUGH_SPACE | 10 | Not enough space for data (firmware, FPGA) |
| ERR_FS_NOT_ENOUGH_SPACE | 11 | Not enough space – file system |
| ERR_FS_FILE_NOT_EXISTS | 12 | File does not exist |
| ERR_FS_FILE_CANT_CREATED | 13 | File can't be created |
| ERR_FS_FILE_CANT_OPEN | 14 | File can't open |
| ERR_FEATURE_NOT_SUPPORTED | 15 | Feature is not supported |
| ERR_RESERVED_2 | 16 | (Reserved) |
| ERR_RESERVED_3 | 17 | (Reserved) |
| ERR_RESERVED_4 | 18 | (Reserved) |
| ERR_RESERVED_5 | 19 | (Reserved) |
| ERR_RESERVED_6 | 20 | (Reserved) |
| ERR_PACKET_CRC | 21 | Packet CRC error |
| ERR_PACKET_MISSED | 22 | Packet number isn't expected (missing packet) |
| ERR_PACKET_SIZE | 23 | Packet size is wrong |
| ERR_RESERVED_7 | 24 | (Reserved) |
| ERR_RESERVED_8 | 25 | (Reserved) |
| ERR_RESERVED_9 | 26 | (Reserved) |
| ERR_RESERVED_10 | 27 | (Reserved) |
| ERR_RESERVED_11 | 28 | (Reserved) |
| ERR_RESERVED_12 | 29 | (Reserved) |
| ERR_EDID_CORRUPTED | 30 | EDID corrupted |
| ERR_NON_LISTED | 31 | Device specific errors |
| ERR_SAME_CRC | 32 | File has the same CRC – not changed |
| ERR_WRONG_MODE | 33 | Wrong operation mode |
| ERR_NOT_CONFIGURED | 34 | Device/chip was not initialized |

The warranty obligations of Kramer Electronics Inc. ("Kramer Electronics") for this product are limited to the terms set forth below:

What is Covered

This limited warranty covers defects in materials and workmanship in this product.

What is Not Covered

This limited warranty does not cover any damage, deterioration or malfunction resulting from any alteration, modification, improper or unreasonable use or maintenance, misuse, abuse, accident, neglect, exposure to excess moisture, fire, improper packing and shipping (such claims must be presented to the carrier), lightning, power surges, or other acts of nature. This limited warranty does not cover any damage, deterioration or malfunction resulting from the installation or removal of this product from any installation, any unauthorized tampering with this product, any repairs attempted by anyone unauthorized by Kramer Electronics to make such repairs, or any other cause which does not relate directly to a defect in materials and/or workmanship of this product. This limited warranty does not cover cartons, equipment enclosures, cables or accessories used in conjunction with this product.

Without limiting any other exclusion herein, Kramer Electronics does not warrant that the product covered hereby, including, without limitation, the technology and/or integrated circuit(s) included in the product, will not become obsolete or that such items are or will remain compatible with any other product or technology with which the product may be used.

How Long this Coverage Lasts

The standard limited warranty for Kramer products is seven (7) years from the date of original purchase, with the following exceptions:

- All Kramer VIA hardware products are covered by a standard three (3) year warranty for the VIA hardware and a standard three (3) year warranty for firmware and software updates; all Kramer VIA accessories, adapters, tags, and dongles are covered by a standard one (1) year warranty.
- Kramer fiber optic cables, adapter-size fiber optic extenders, pluggable optical modules, active cables, cable retractors, ring mounted adapters, portable power chargers, Kramer speakers, and Kramer touch panels are covered by a standard one (1) year warranty. Kramer 7-inch touch panels purchased on or after April 1st, 2020 are covered by a standard two (2) year warranty.
- 3. All Kramer Calibre products, all Kramer Minicom digital signage products, all HighSecLabs products, all streaming, and all wireless products are covered by a standard three (3) year warranty.
- 4. All Sierra Video MultiViewers are covered by a standard five (5) year warranty.
- 5. Sierra switchers & control panels are covered by a standard seven (7) year warranty (excluding power supplies and fans that are covered for three (3) years).
- 6. K-Touch software is covered by a standard one (1) year warranty for software updates.
- 7. All Kramer passive cables are covered by a lifetime warranty.

Who is Covered

Only the original purchaser of this product is covered under this limited warranty. This limited warranty is not transferable to subsequent purchasers or owners of this product.

What Kramer Electronics Will Do

Kramer Electronics will, at its sole option, provide one of the following three remedies to whatever extent it shall deem necessary to satisfy a proper claim under this limited warranty:

- 1. Elect to repair or facilitate the repair of any defective parts within a reasonable period of time, free of any charge for the necessary parts and labor to complete the repair and restore this product to its proper operating condition. Kramer Electronics will also pay the shipping costs necessary to return this product once the repair is complete.
- Replace this product with a direct replacement or with a similar product deemed by Kramer Electronics to perform substantially the same function as the original product. If a direct or similar replacement product is supplied, the original product's end warranty date remains unchanged and is transferred to the replacement product.
- 3. Issue a refund of the original purchase price less depreciation to be determined based on the age of the product at the time remedy is sought under this limited warranty.

What Kramer Electronics Will Not Do Under This Limited Warranty

If this product is returned to Kramer Electronics or the authorized dealer from which it was purchased or any other party authorized to repair Kramer Electronics products, this product must be insured during shipment, with the insurance and shipping charges prepaid by you. If this product is returned uninsured, you assume all risks of loss or damage during shipment. Kramer Electronics will not be responsible for any costs related to the removal or re-installation of this product from or into any installation. Kramer Electronics will not be responsible for any costs related to any setting up this product, any adjustment of user controls or any programming required for a specific installation of this product.

How to Obtain a Remedy Under This Limited Warranty

To obtain a remedy under this limited warranty, you must contact either the authorized Kramer Electronics reseller from whom you purchased this product or the Kramer Electronics office nearest you. For a list of authorized Kramer Electronics resellers and/or Kramer Electronics authorized service providers, visit our web site at www.kramerav.com or contact the Kramer Electronics office nearest you.

In order to pursue any remedy under this limited warranty, you must possess an original, dated receipt as proof of purchase from an authorized Kramer Electronics reseller. If this product is returned under this limited warranty, a return authorization number, obtained from Kramer Electronics, will be required (RMA number). You may also be directed to an authorized reseller or a person authorized by Kramer Electronics to repair the product.

If it is decided that this product should be returned directly to Kramer Electronics, this product should be properly packed, preferably in the original carton, for shipping. Cartons not bearing a return authorization number will be refused.

Limitation of Liability

THE MAXIMUM LIABILITY OF KRAMER ELECTRONICS UNDER THIS LIMITED WARRANTY SHALL NOT EXCEED THE ACTUAL PURCHASE PRICE PAID FOR THE PRODUCT. TO THE MAXIMUM EXTENT PERMITTED BY LAW, KRAMER ELECTRONICS IS NOT RESPONSIBLE FOR DIRECT, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES RESULTING FROM ANY BRACH OF WARRANTY OR CONDITION, OR UNDER ANY OTHER LEGAL THEORY. Some countries, districts or states do not allow the exclusion or limitation of relief, special, incidental, consequential or indirect damages, or the limitation of liability to specified amounts, so the above limitations or exclusions may not apply to you.

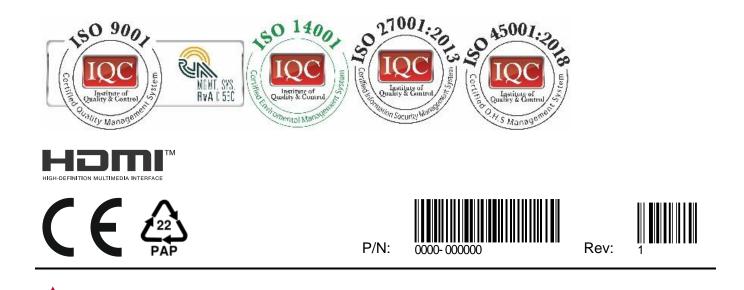

Exclusive Remedy

TO THE MAXIMUM EXTENT PERMITTED BY LAW, THIS LIMITED WARRANTY AND THE REMEDIES SET FORTH ABOVE ARE EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES, REMEDIES AND CONDITIONS, WHETHER ORAL OR WRITTEN, EXPRESS OR IMPLIED. TO THE MAXIMUM EXTENT PERMITTED BY LAW, KRAMER ELECTRONICS SPECIFICALLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES, INCLUDING, WITHOUT LIMITATION, WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. IF KRAMER ELECTRONICS CANNOT LAWFULLY DISCLAIM OR EXCLUDE IMPLIED WARRANTIES UNDER APPLICABLE LAW, THEN ALL IMPLIED WARRANTIES COVERING THIS PRODUCT, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, SHALL APPLY TO THIS PRODUCT AS PROVIDED UNDER APPLICABLE LAW. IF ANY PRODUCT TO WHICH THIS LIMITED WARRANTY APPLIES IS A "CONSUMER PRODUCT" UNDER THE MAGNUSON-MOSS WARRANTY ACT (15 U.S.C.A. §2301, ET SEQ.) OR OTHER APPLICABLE LAW, THE FOREGOING DISCLAIMER OF IMPLIED WARRANTIES SHALL NOT APPLY TO YOU, AND ALL IMPLIED WARRANTIES ON THIS PRODUCT, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR THE PARTICULAR PURPOSE, SHALL APPLY AS PROVIDED UNDER APPLICABLE LAW.

Other Conditions

This limited warranty gives you specific legal rights, and you may have other rights which vary from country to country or state to state. This limited warranty is void if (i) the label bearing the serial number of this product has been removed or defaced, (ii) the product is not distributed by Kramer Electronics or (iii) this product is not purchased from an authorized Kramer Electronics reseller. If you are unsure whether a reseller is an authorized Kramer Electronics reseller, visit our web site at www.kramerav.com or contact a Kramer Electronics of fice from the list at the end of this document. Your rights under this limited warranty are not diminished if you do not complete and return the product registration form or complete and submit the online product registration form. Kramer Electronics thanks you for purchasing a Kramer Electronics product. We hope it will give you years of satisfaction.

Disconnect the unit from the power supply before opening and servicing

For the latest information on our products and a list of Kramer distributors, visit our website where updates to this user manual may be found.

We welcome your questions, comments, and feedback.
