VSM on Cloud
Management Platform for VIA Devices

VSM (VIA Site Management) on Cloud is an advanced cloud-based software management platform that enables administrators to deploy, manage, configure, and monitor all connected VIA devices from one central location. This cloud solution is compatible with all VIA device models from 3.3.x and offers a seamless, user-friendly experience for administrators and system integrators

FEATURES

 - Intuitive User Interface
The VSM cloud service provides an intuitive, user-friendly interface that simplifies device management and deployment

 - Centralized Management
• Deployment: Easily on-board all your VIA devices across various networks.
• Device Organization: Organize VIA devices and create settings templates.
• Configuration: Set defaults and configure features remotely.
• Health Monitoring: Monitor storage levels, device statuses, and current firmware versions from a central location.
• Usage Analytics: Generate comprehensive usage reports for all your VIA devices

 - Enhanced Communication
• Alerts: Set customized messages to display on VIA screens as needed.
• Digital Signage (additional subscription): Manage content, create templates, and schedule campaigns directly from the cloud

 - Automated Maintenance
• Device Updating: Schedule and push new firmware updates to ensure all devices are up to date

By leveraging cloud technology, VSM offers a scalable, flexible, and always up-to-date solution for managing your VIA devices, ensuring optimal performance and user satisfaction across your organization
