1 Introduction

Welcome to Kramer Electronics! Since 1981, Kramer Electronics has been providing a world of unique, creative, and affordable solutions to the vast range of problems that confront the video, audio, presentation, and broadcasting professional on a daily basis. In recent years, we have redesigned and upgraded most of our line, making the best even better! Our 1,000-plus different models now appear in 11 groups¹ that are clearly defined by function.

Congratulations on purchasing your Kramer **SV-301**, **SV-301xl**, **SV-302**, **SV-303**, **SV-304**, **SV-305**, **SV-306**, and/or **SV-307 Wall Plate** device. Each is designed to work as an integral part of Kramer's A/V SummitView™ Kit or in some cases as a standalone transmitter for a Kramer TP receiver.

The package includes:

- One of the following items: **SV-301**, **SV-301xl**, **SV-302**, **SV-303**, **SV-304**, **SV-305**, **SV-306**, or **SV-307 Wall Plate**

2 Getting Started

We recommend that you:

- Unpack the equipment carefully and save the original boxes and packaging materials for possible future shipment
- Review the contents of this user manual
- Use Kramer high performance, high resolution cables³ as recommended in [Section 9](#)

2.1 Recycling Kramer Products

The Waste Electrical and Electronic Equipment (WEEE) Directive 2002/96/EC aims to reduce the amount of WEEE sent for disposal to landfill or incineration by requiring it to be collected and recycled. To comply with the WEEE Directive, Kramer Electronics has made arrangements with the European Advanced Recycling Network (EARN) and will cover any costs of treatment, recycling and recovery of waste Kramer Electronics branded equipment on arrival at the EARN

3 Overview

This user manual describes the:

- **SV-301** provided as the default wall plate with the **SV-551 SummitView™ Essentials Kit** and described in that user manual, as well as in [Section 4.1](#) (U.S. version) and [Section 5.1](#) (U.K. and European version) in this manual
- **SV-301xl** provided as the default wall plate with the **SV-552 SummitView™ Essentials Kit** and described in that user manual, as well as in [Section 4.2](#) (U.S. version) and [Section 5.2](#) (U.K. and European version) in this manual
- **SV-302** provided as the default wall plate with the **SV-551 and SV-552 SummitView™ Essentials Kit** and described in that user manual, as well as in [Section 4.3](#) (U.S. version) and [Section 5.3](#) (U.K. and European version)
- **SV-303** ([Section 4.4](#) U.S. version, [Section 5.4](#) U.K. and European version)
- **SV-304** ([Section 4.5](#) U.S. version, [Section 5.5](#) U.K. and European version)
- **SV-305** ([Section 4.6](#) U.S. version, [Section 5.6](#) U.K. and European version)
- **SV-306** ([Section 4.7](#) U.S. version, [Section 5.7](#) U.K. and European version)
- **SV-307** ([Section 4.8](#) U.S. version)

To achieve the best performance:

- Connect only good quality connection cables, thus avoiding interference, deterioration in signal quality due to poor matching, and elevated noise-levels (often associated with low quality cables)
- Do not secure the cables in tight bundles or roll the slack into tight coils
- Avoid interference from neighboring electrical appliances and position your Kramer wall plate away from moisture, excessive sunlight and dust

	Caution: No operator serviceable parts inside unit
	Warning: Use only the Kramer Electronics input power wall adapter that is provided with the unit*
	Warning: Disconnect power and unplug unit from wall before installing or removing the device or servicing unit * For example, P/N 2535-00 0251 (12V DC), P/N 2535-052 002 (5V DC)

3.1 Shielded Twisted Pair and Unshielded Twisted Pair

We recommend that you use Shielded Twisted Pair (STP) cable. There are different grades of STP cable available, and we advise you to use the best quality STP cable that you can afford. Our non-skew-free cable, Kramer **BC-STP** is intended for digital signals and for analog signals where skewing is not an issue. For cases where skewing occurs, our UTP skew-free cable, Kramer **BC-XTP**, should be used. Bear in mind, though, that we advise using STP cables where possible, since the compliance to electromagnetic interference has been tested using STP cables.

Although Unshielded Twisted Pair (UTP) cable might be preferred for long range applications UTP cable should be installed as far as possible from electric cables, motors, and so on, as these devices tend to create electromagnetic interference. However, since the use of UTP cable might not conform to electromagnetic standards, Kramer does not commit to meeting the standard with UTP cable.

6 Wiring the Rear Wall Plate Connectors

STP cabling of 50' (15.24m)¹ in length is provided (**SV-301/302**) with the Kramer A/V SummitView™ Kits². When required, longer STP cabling can be used when purchased for standalone wall plates but we recommend a maximum transmission range of up to 100' (30.48m). Exceeding the recommended distance may result in reduced image quality.

Note: For cabling the **SV-306** and **SV-307** wall plates, use either Kramer **BCP-DGKat524** or **BCP-DGKat623** (see [Section 9.1](#)).

This section describes how to connect the rear panel for the:

- US wall plate versions (see [Section 6.1](#))
- European wall plate versions (see [Section 6.2](#))

¹ Plenum-rated for the SummitView™ US version; non-plenum for the SummitView™ Europe

² Or should be purchased separately for a standalone machine, see [Table 18](#) for reference

6.1 Wiring the TP Line In/Line Out RJ-45 Connector

This section defines the TP pinout using a **straight** pin-to-pin cable with RJ-45 connectors.

5	Blue / White
6	Green
7	Brown / White
8	Brown

Warning:

Using a TP cable that is incorrectly wired will cause permanent damage to the device

Figure 3: TP Pinout Wiring

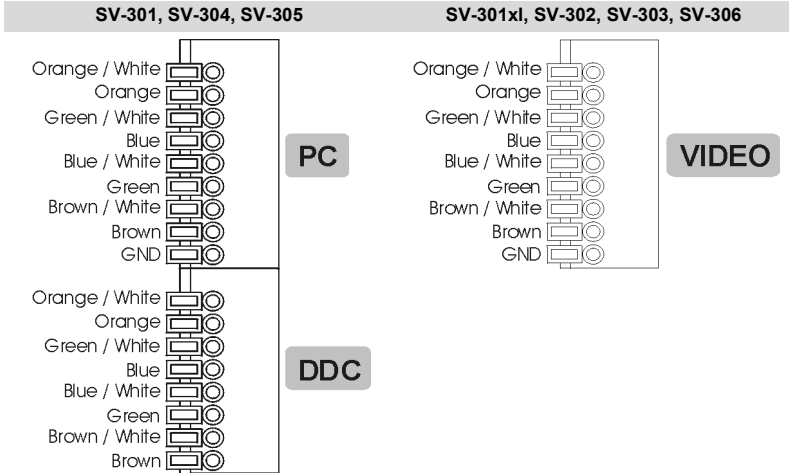

6.2 Wiring the U.K. and European Terminal Blocks

The European wall plates are equipped with an easy plug-in terminal block to attach the CAT 5 cables. Follow the colors of the color-coded sticker on these terminals for proper connection of the CAT 5 cable.

[Figure 3](#) defines the pinouts for the terminal block.

Figure 4: Terminal Block Pinouts (U.K. and Europe)

Notes:

- The PC and Video terminal blocks have 9 contacts and the DDC terminal block has 8 contacts
- Use the connector clips when removing the wires, not when inserting them
- Each wire protrudes 9mm in length from the plastic insulation so that it can be easily connected. To prevent the wires crossing, be sure that each wire is completely inserted
- The cable Ground shielding must be connected / soldered to the connector shield

7 Grounding the Wall Plate

The grounding screw is used to earth the chassis of the unit to the ground of the building, thus preventing static electricity from interfering with the product's performance.

[Table 16](#) defines the grounding screw components.

Table 16: Grounding Screw, Lock Washers and Ring Tongue Terminal

#	Item
1	M3X6 screw
2	1/8" Toothed Lock Washer
3	M3 Ring Tongue Terminal

To ground a wall plate:

1. Connect the Ring Tongue terminal to the building grounding point wire (it is recommended to use a green-yellow AWG#18 wire, crimped with a proper hand-tool).
2. Insert the M3x6 screw through the toothed lock washers and the tongue terminal in the order shown above.
3. Insert the M3x6 screw (with the two toothed lock washers and ring tongue terminal) into the grounding screw hole and tighten the screw.

8 Wall Plate and Switcher Compatibility

[Table 17](#) lists which wall plates are compatible with the **SV-551** and **SV-552** switchers.
