

# TR2060

## Stereo groundloop isolator RCA male - 3.5mm jack

The TR2060 is a basic ground loop isolator, designed to electrically isolate audio devices from each other. Hum in audio systems is usually caused by ground loops in the system. A common mode current will flow in a ground loop created by an electrical system that has grounds on different voltage potentials. This results in a 50 Hz hum in the audio signal. The most common method to solve these problems is an audio isolation transformer such as the TR2060 which always need to be in reach for every audio technician. When ground loop problems are encountered, these can be solved in a jiffy, by using the TR2060.

### System specifications:

Turn ratio		1 : 1
Frequency	Range (-10 dB)	20 Hz - 20 kHz
THD+N (@ 1 kHz)		< 0.1%
Connectors		3.5 mm Jack male to 2 x RCA female

### Product Features:

Dimensions		35 x 35 x 65 mm (W x H x D)
Weight		0.050 kg
Construction		Metal
Colours		Black

### Shipping & Ordering:

Packaging		Polybag
Shipping weight & volume		1.030 kg - 0.0054 Cbm (20 pcs)
